

Project: Her Majesties Prison, London area.

Details: To supply fabricated and powder coated Aluminium Cappings to brickwork piers to enhance the overall look of the exterior walls.

Before:

After:

After a site visit and measure it was decided that because of the irregularity of the walls and thirteen piers, the best results would be achieved by supplying the aluminium casings in four sections. The three vertical sections were interlocking, all being different sizes. This was because the old walls narrowed as they went up. The piers also all varied in both width and height.

B.I.G. supplied the powder coated fabrications, sealant, self tapping screws, wall fixings and drill bits.
